

WatchMeGrow

Security First

Our streaming video partner, WatchMeGrow, keeps your data safe.

We make security a top priority.

WatchMeGrow provides extensive security to protect your privacy.

Personal information is stored in the cloud with Amazon Web Services (AWS), one of the world's most secure, powerful and trusted cloud-based data solutions.

Only approved users have access to streaming video at our school; as families leave, they are removed as users.

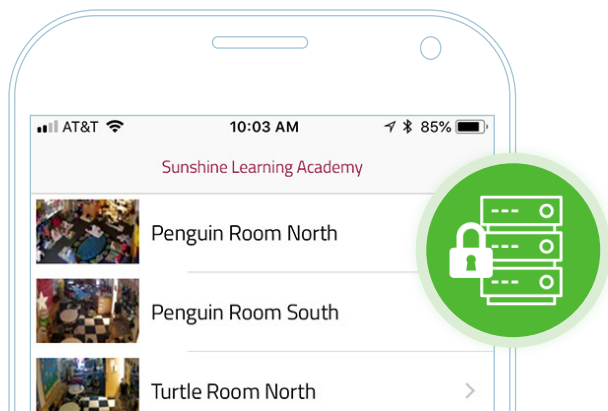

Each family's access is limited to their child's classroom and any approved common area cameras, as authorized by your center director.

The WatchMeGrow system automatically suspends accounts that haven't been accessed recently, temporarily disables accounts after too many incorrect logins, and allows only one user at a time with the same login credentials.

All video and user data streaming through our cameras and servers to our end users are encrypted using TLS (Transport Layer Security), the standard in internet data transfer security.

Each user creates a unique username and password that we manage. Usernames and passwords are always encrypted to ensure your data stays secure.

WatchMeGrow's security has been verified by Leviathan Security Group, a respected authority on internet security. No other vendor in the industry can claim this stamp of approval. Every video system in childcare should be vetted by an accredited third-party security firm – virus scan software isn't enough.

Keep these best practices in mind:

KEEP YOUR LOGIN CREDENTIALS SAFE

Please don't share your username and password with anyone. This helps us ensure only authorized users can stream video.

RESPECT EVERYONE'S PRIVACY

Please don't record video or take screenshots. It violates the privacy of the other children in the class, the teachers, and their families. It also violates WatchMeGrow's terms of service and can result in suspension or termination of your account.

WatchMeGrow
Anywhere.
